

Image Processing Overview

This document provides a simple three-page example related to images. Since we cannot load external images here, we use simple vector drawings to illustrate placeholders where images would normally appear.

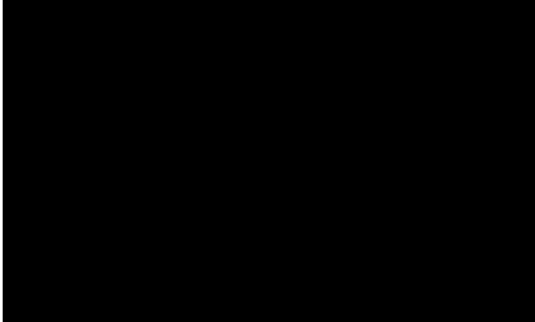

Image Filters

This page describes common image filters such as blurring, sharpening, and edge detection. These filters help enhance or extract information from images.

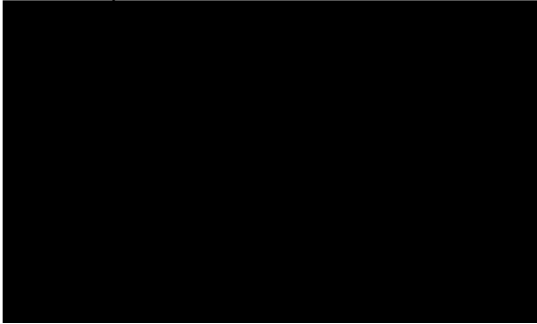

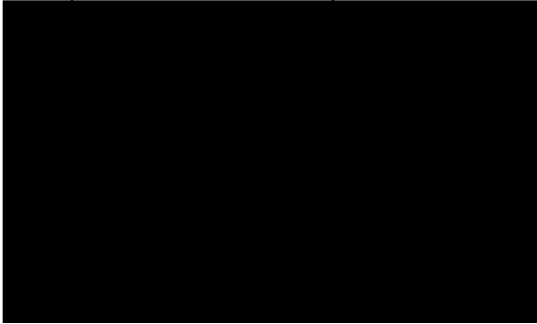

Image Compression

Compression reduces file size while trying to maintain quality. JPEG is a common lossy format, while PNG provides lossless compression.
